INTRODUCTION

WHO WE ARE

SafeSmart is a global leader in engineered access solutions, trusted by organizations operating in complex, safety-critical environments where reliability, efficiency, and worker protection are paramount. Across construction sites, industrial facilities, aviation maintenance operations, mining projects, energy infrastructure, and large-scale manufacturing environments, SafeSmart systems enable crews to move safely and efficiently between elevations while maintaining productivity and compliance.

For more than three decades, SafeSmart has partnered with contractors, engineers, and facility operators to solve access challenges that conventional ladders, scaffold, and improvised solutions often fail to address. Our portfolio spans a broad range of modular and engineered systems—from portable adjustable stair systems to fully integrated platforms and large-scale access structures—designed to support every stage of a project, from construction and commissioning to inspection, maintenance, and long-term operations.

What sets SafeSmart apart is our commitment to engineering the right solution for each environment. Every system is developed with a deep understanding of real-world site conditions, operational demands, and safety requirements. Through advanced modular design, high-strength materials, and practical field experience, SafeSmart delivers access systems that reduce risk, improve workflow, and eliminate inefficient methods of working at height.

Safe, reliable access is not optional in today's industries—it is fundamental to keeping projects moving and people protected. That is why organizations around the world rely on SafeSmart as the trusted authority in engineered access solutions.

Introducing **ADAPTASTEP™**

AdaptaStep is SafeSmart's fully modular access platform system designed to solve complex access challenges where standard platforms and stairs cannot. Built around a modular extrusion-based framework, AdaptaStep allows platforms, stairs, guardrails, and structural components to be configured into a wide range of access solutions—from simple work platforms to large crossovers, catwalks, bridges, and multi-level mezzanine structures.

At the core of the system is a precision-engineered aluminum extrusion design that allows components to be quickly assembled, expanded, or reconfigured using integrated connection points and standard fasteners. This modular approach enables AdaptaStep systems to adapt to changing operational requirements while maintaining structural strength, safety compliance, and consistent worker access across the entire structure.

Developed to support demanding industrial, construction, aviation, and facility environments, AdaptaStep provides engineers and project teams with the flexibility to design access systems tailored to their exact needs. Its combination of modular components, configurable layouts, and durable aluminum construction makes AdaptaStep a powerful solution for projects that require safe, adaptable access across complex equipment, structures, and work areas.

Summary of Benefits

- **Fully Modular System** – Components can be configured into crossovers, catwalks, platforms, bridges, and mezzanines to solve complex access challenges.
- **Engineered Aluminum Construction** – High-strength aluminum provides durability and corrosion resistance while remaining lightweight and easy to install.
- **Configurable for Any Environment** – Adaptable layouts allow systems to be expanded, modified, or reconfigured as site conditions and operational needs evolve.

ADAPTASTEP™ is a patented SafeSmart innovation.

Developed and engineered by SafeSmart, AdaptaStep™ represents a fully modular access platform system designed to deliver configurable, engineered solutions for complex access challenges. The AdaptaStep™ name, system design, and associated technologies are proprietary to SafeSmart and protected under applicable intellectual property protections.

AdaptaStep gave us a flexible access solution where standard platforms simply wouldn't work. The modular design made it easy to configure exactly what our site needed.

MAINTENANCE MANAGER | CONFIDENTIAL PROJECT

The Problem with Site-Built Solutions

Makeshift Solutions are Liability - Yet the Risks are Everywhere

Across industrial facilities, rooftops, and maintenance environments, access solutions are often built on site using timber crossovers, improvised stairs, or other temporary structures intended as quick fixes. While convenient at first, these solutions frequently deteriorate over time—wood can rot or warp, steel can rust, and improvised assemblies rarely provide consistent stair geometry, guardrail protection, or long-term structural reliability.

When workers must navigate aging or poorly constructed access structures while carrying tools or equipment, the risk of slips, trips, and falls increases significantly. What begins as a low-cost shortcut can quickly become a long-term safety hazard, exposing workers to unnecessary risk and relying on access solutions that were never engineered to last.

Where Site-Built Solutions Fall Short

Rapid Material Deterioration - Wood rots, steel rusts, and improvised structures degrade quickly in outdoor and industrial environments.

Inconsistent Safety Protection - Site-built stairs and platforms often lack proper guardrails, handrails, and compliant stair geometry.

Limited Structural Reliability - Temporary builds are rarely engineered for long-term loads or repeated daily use.

Increased Slip, Trip & Fall Risk - Uneven steps, worn surfaces, and poor construction create hazards for workers carrying tools and equipment.

COMPLIANCE & SAFETY NOTE

Did You Know?

OSHA requires elevated walking-working surfaces to be structurally sound and equipped with proper guardrail protection when workers are exposed to fall hazards.

Engineered platform systems like AdaptaStep™ provide compliant access and guardrail protection designed for long-term safety and reliability.

Source: OSHA 29 CFR 1910 Subpart D – Walking-Working Surfaces

Why Choose **ADAPTASTEP™**

An Engineered, Compliant Access Platform System

AdaptaStep was engineered to provide a safer, more adaptable alternative to site-built platforms, improvised stairs, and fixed access structures. With its fully modular design, precision aluminum extrusions, and configurable components, AdaptaStep allows facility teams to create safe, compliant access systems tailored to complex environments. Unlike galvanized steel alternatives, its lightweight, corrosion-resistant aluminum construction simplifies field modifications, improves manual handling, reduces loading on weight-sensitive surfaces, and provides a fully recyclable solution for long-term access requirements.

Benefit	Description
Fully Modular Design	Configure platforms, stairs, catwalks, crossovers, and bridges to match exact site requirements and access challenges.
Endless Configurations	The adaptable extrusion system allows structures to be expanded, modified, or reconfigured as operational needs change.
Engineered Aluminum Construction	High-strength aluminum provides durability, corrosion resistance, and long service life in demanding environments.
Fast Installation	Precision components bolt together quickly, reducing fabrication time and simplifying installation on site. No Cutting - No Welding.
Long-Term Access Solution	Designed for permanent facility access, providing a safer and more reliable alternative to site-built structures.

The Smarter Alternative to Site-Built Solutions

Improvised platforms and site-built stairs were never designed to deliver the durability, safety, and consistency required in facilities. AdaptaStep provides a fully engineered solution that replaces temporary builds with reliable, long-term access systems.

See how AdaptaStep compares to traditional site-built access.

Engineered Performance

Key Features of the **ADAPTASTEP™** System

70° Stair Attachment

Provides safe, compact stair access where space is limited while maintaining comfortable stair geometry and secure footing.

90° Ladder Attachment

Allows vertical ladder access in confined areas where stair systems are not practical, maintaining safe transitions between levels.

Durable Handrails with Toeboards

Heavy-duty aluminum guardrails and integrated toeboards provide fall protection and help prevent tools or materials from falling from elevated platforms.

T-Bolt Hardware

T-bolt fasteners lock into the patented extrusion channels, allowing components to securely connect for fast assembly.

45° Stair Attachment

Creates comfortable stair access for frequent worker movement between platforms while maintaining consistent step spacing and handrail protection.

Integrated Joiner System

Precision-engineered joiners allow stairs and ladders to securely attach to AdaptaStep platforms, creating rigid and stable access connections.

Optional Non-Penetrating Feet

Non-penetrating feet allow AdaptaStep™ systems to be securely installed without drilling into roofs or existing surfaces, preserving waterproofing while maintaining stable, compliant support.

Stair & Ladder Attachments

Accessing the ADAPTASTEP™ System

45° STAIR MODULE

- 9.5" Tread Length
- 9.5" Step Gap
- Anti-Slip Treads
- Handrails Bolt to Stair Sides
- Available in 1 to 9 step configurations

Module Dimensions	
TREAD WIDTH	VERTICAL HEIGHT
24 inch	From 19 inch to 12 feet in 9.5 inch increments
36 inch	
48 inch	

70° STAIR MODULE

- 12" Step Height
- Anti-Slip Treads
- Handrails Bolt to Stair Sides
- 3ft & 4ft Standard Widths
- Available in 1 to 15 step configurations

Module Dimensions	
TREAD WIDTH	VERTICAL HEIGHT
24 inch	From 24 inch to 12 feet in 12 inch increments
36 inch	
48 inch	

90° LADDER MODULE

- 12" Rung Spacing
- Anti-Slip Rungs
- Handrails Bolt to Ladder Sides
- 3ft & 4ft Standard Widths
- Available in 1 to 11 rung configurations

Module Dimensions	
TREAD WIDTH	VERTICAL HEIGHT
24 inch	From 24 inch to 12 feet in 12 inch increments
36 inch	
48 inch	

Connection System

Connecting the ADAPTASTEP™ System

AdaptaStep uses a versatile connection system made up of joiners, bracket mounts, and adjustable feet that secure components to SafeSmart's patented T-slot extrusions. This design allows platforms, stairs, and access points to be positioned exactly where they are needed. While many additional components exist for specialized applications, the connection elements shown here represent the core hardware used in most AdaptaStep configurations.

45° STAIR CONNECTIONS

1. 45° Foot
2. 45° Stair Top Mount
3. 45° Joiner

70° STAIR CONNECTIONS

1. 70° Foot
2. 70° Stair Top Mount
3. 70° Joiner

90° LADDER CONNECTIONS

1. 90° Foot
2. 90° Ladder Top Mount
3. 90° Joiner

ADDITIONAL CONNECTIONS

1. 8" Corner Joiner
2. 8" Platform Joiner
3. Corner Brace Bracket

Limitless Configurations

The Most Versatile Access System on the Market

Complete Roof Access Solution

AdaptaStep™ solutions integrate seamlessly with Z-Stack™ for simplified rooftop access.

AdaptaStep is engineered to solve complex access challenges where standard platforms and prefabricated structures fall short. Built around SafeSmart's patented extrusion framework, the system allows platforms, stairs, guardrails, and structural components to be configured into purpose-built access solutions that match real-world operating environments. From navigating dense industrial equipment to creating safe elevated work zones, AdaptaStep enables engineers and facility teams to design compliant, durable access systems tailored to the exact requirements of the site.

Crossovers

AdaptaStep crossovers provide safe, engineered passage over pipes, conveyors, utilities, and other fixed equipment where uninterrupted worker movement is critical.

- Safely spans pipes, conveyors, and mechanical infrastructure
- Engineered stair access for frequent worker movement
- Modular heights and spans for complex plant layouts
- Ideal for refineries, processing plants, and industrial facilities

Catwalks

AdaptaStep catwalk systems create safe elevated walkways along machinery, process equipment, and production lines where regular access is required.

- Continuous access along equipment and production lines
- Modular sections for long or complex walkway runs
- Integrated guardrails and toe boards for fall protection
- Ideal for maintenance, inspection, and operational access

Platforms

AdaptaStep work platforms provide stable, compliant access to equipment, machinery, and service areas where technicians must safely perform tasks at height.

- Configurable platform sizes and working heights
- Engineered guardrail systems for fall protection
- Designed for demanding industrial environments

Bridging & Ramps

AdaptaStep bridging systems connect structures and equipment surfaces where safer, more durable transitions across gaps or elevation changes are required.

- Configurable spans to match site conditions
- Smooth transitions for workers and equipment
- Ideal for rooftop access and industrial facilities

Mezzanines

AdaptaStep mezzanine systems allow facilities to create elevated work areas, service platforms, or storage space within existing structures without permanent construction. Using the modular AdaptaStep framework, mezzanines can be configured with integrated stairs, guardrails, and platforms to deliver safe, compliant access while maximizing usable space within industrial and operational environments.

Precision Access Engineering

Custom Solutions Powered by 3D Site Scanning

Every facility is different. Tight equipment clearances, piping networks, cable trays, rooftop obstacles, and existing infrastructure often make standard access solutions impractical.

That's why SafeSmart begins complex AdaptaStep projects with a comprehensive site scoping and measurement process. Using advanced 3D LiDAR scanning technology, we capture precise measurements of your environment and convert them into an accurate digital model of the site.

This allows our engineering team to design custom access systems that integrate seamlessly with existing infrastructure, ensuring proper clearances, safe navigation routes, and efficient installation. The result is a purpose-built access solution designed to fit correctly the first time—eliminating guesswork, rework, and delays.

How Our Process Works

- 1. Site Scoping & Access Planning** - Our team evaluates your facility to identify safe navigation routes, equipment access points, and structural constraints that will influence the final design.
- 2. High-Precision 3D LiDAR Scanning** - Advanced laser scanning captures millions of measurement points, producing a highly accurate digital model of the entire work area.
- 3. Engineering & Layout Design** - Using the scan data, our engineers design AdaptaStep systems that navigate around pipes, equipment, and structures while maintaining OSHA-compliant access.
- 4. Detailed Scope of Work Layouts** - Clients receive a complete design package including layouts, dimensions, and visualizations showing how the system integrates into the site.
- 5. Fabrication & Installation** - Once approved, components are manufactured and delivered ready for efficient installation with minimal disruption to operations.

From Scan to Solution

Precision Layouts Built from Real Site Data

Conveyor Crossovers

AdaptaStep conveyor crossovers provide safe, compliant access over active production lines without disrupting operations. Designed to replace temporary scaffold and improvised step-overs, these engineered systems deliver stable, hands-free movement while supporting safety and production continuity.

3D Scanning Assisted with:

- Purpose-Built Crossovers: Designed for repeated movement
- Custom Integration: Fits existing equipment and layout geometry
- Stable & Guarded: Consistent stair geometry with fall protection
- Minimal Disruption: Installed without impacting production flow

Navigational Catwalks

AdaptaStep navigational catwalks provide safe, compliant walkways through complex industrial environments without disrupting operations. Designed using detailed site scoping and 3D scanning, these engineered systems ensured precise fitment for seamless manufacturing, installation, and long-term safety.

3D Scanning Assisted with:

- Conveyor networks crossing production floors
- Tight clearances around processing equipment
- Limited overhead space
- Strict sanitation and compliance requirements
- No tolerance for production disruption

Engineered Access for Complex Environments

Proven Solutions Across Critical Industries

AdaptaStep systems are deployed across industrial facilities, infrastructure projects, energy operations, and commercial environments where safe and reliable access around equipment, obstacles, and elevated work areas is essential. From rooftop navigation and industrial processing plants to data centers and oil & gas facilities, AdaptaStep provides engineered access solutions that replace improvised platforms with durable, configurable systems built for long-term use.

- **Fully Modular System**
Configures into platforms, catwalks, and crossovers.
- **Engineered Aluminum Construction**
Lightweight, corrosion-resistant, and built to last.
- **Designed for Permanent Access**
Replaces temporary or site-built access structures.
- **Fast Bolt-Together Installation**
Simple assembly with integrated connection hardware.
- **Adaptable to Changing Facilities**
Expand or reconfigure as site needs evolve.

SHIFTING AWAY FROM SITE-BUILT ACCESS

Across industrial facilities and commercial environments, companies are moving away from improvised platforms and temporary structures that deteriorate over time. Instead, facility teams are investing in engineered access systems designed for long-term safety and reliability.

**BUILD SAFER ACCESS WITH
ADAPTASTEP™**

Industry Applications

Configured for a Wide Range of Uses

Rooftop Navigation

Safe Navigation Across Complex Rooftop Infrastructure

AdaptaStep systems create safe, compliant pathways across rooftops where ducting, piping, and elevation changes make navigation difficult.

- Safe crossover access over ducts, piping, and conduit runs
- Bridges elevation changes between roof zones and equipment pads
- Guardrail protection around high-traffic maintenance areas
- Ideal for HVAC systems, solar infrastructure, and rooftop utilities

Facility Equipment Access

Engineered Access to Mechanical & Operational Systems

AdaptaStep platforms provide stable access to machinery, equipment banks, and service areas for inspections and maintenance.

- Safe service access to pumps, compressors, and equipment skids
- Configurable platforms positioned around machinery
- Designed for routine maintenance and operational servicing
- Common in manufacturing plants and industrial facilities

Industry Applications

Purpose-Built Solution for a Wide Range of Uses

Oil & Gas Infrastructure

Reliable Access Across Energy & Processing Facilities

AdaptaStep systems support safe access across piping networks, valves, and processing equipment that require elevated access.

- Crossovers over pipelines, manifolds, and processing lines
- Access platforms for valves, meters, and instrumentation
- Corrosion-resistant aluminum suited for harsh environments
- Ideal for refineries, terminals, and processing facilities

Operations & Service Platforms

Elevated Work Zones for Critical Operations

AdaptaStep platforms create elevated operational areas where workers must access equipment, systems, or service points in active facilities.

- Safe service platforms for electrical and control systems
- Access around equipment racks and infrastructure systems
- Modular layouts for evolving facility operations
- Ideal for rail yards, data centers, and processing plants

Industry Applications

Purpose-Built Solution for a Wide Range of Uses

Solar Inverter Platforms

Reliable Access Across Energy & Processing Facilities

AdaptaStep is a fully modular access platform designed for complex inverter layouts and evolving solar sites. Its plug-and-play system allows platforms, steps, and bridging sections to be configured and expanded as site needs change, providing a scalable, long-term solution for safe, compliant access. Built for flexibility without compromise, AdaptaStep supports complex arrangements, future expansion, and consistent access across solar farms—setting the industry standard for adaptable, engineered inverter platform solutions.

Why AdaptaStep™ is the Premier Solar Inverter Platform System

- Engineered access platforms designed specifically for solar inverter maintenance and servicing
- Modular configurations adapt to inverter pads, combiner boxes, and electrical equipment layouts
- Elevated platforms improve safe navigation across uneven inverter yards
- OSHA-compliant guardrails and stair access enhance technician safety during service operations
- Corrosion-resistant aluminum construction built for harsh outdoor solar environments
- Modular system allows easy expansion as solar sites grow or equipment changes

Project Profile: ENGINEERED ACCESS AT LINDE ELECTRONICS

CUSTOMIZED
ADAPTASTEP™

At Linde Electronics' Phoenix facility, SafeSmart partnered with the operations team to design a safer and more efficient access system for their application units. Maintenance crews needed reliable access to elevated service points located within tight footprints surrounded by fixed structures, piping, and sensitive equipment.

Using the AdaptaStep modular platform system, SafeSmart engineered a fully customized aluminum access platform that navigates around existing infrastructure while providing safe, uninterrupted access to critical service locations. Designed to integrate directly with the facility's existing concrete pads and structures, the system delivers long-term OSHA-compliant access without the risks and inefficiencies associated with ladders or temporary scaffolding.

Key Challenges

The existing access methods created safety risks and operational inefficiencies for maintenance crews.

- Ladders and temporary scaffolding introduced fall hazards
- Elevated equipment surrounded by fixed structures and piping
- Limited space within the application unit footprint
- Need for a permanent OSHA-compliant access solution

ADAPTASTEP™ Advantages

AdaptaStep's modular design allowed SafeSmart to engineer a platform tailored precisely to the site conditions.

- Wraparound platform navigating complex equipment
- 10'-8" elevation providing clearance over obstructions
- 70° stair access for direct service entry points
- Adjustable base plates mounted to concrete pads
- OSHA-compliant guardrails, gates, and mid-rails

The Outcome

The completed AdaptaStep platform is now an integral part of Linde Electronics' maintenance workflow, providing safe, reliable access to critical application units while eliminating the need for ladders and temporary scaffolding. The modular aluminum system integrates seamlessly with the facility's existing infrastructure, navigating around piping, equipment, and structural obstructions without requiring major site modifications.

With OSHA-compliant guardrails, secure stair access, and a durable corrosion-resistant aluminum structure, the platform delivers long-term safety and reliability for routine inspections and servicing. The AdaptaStep system not only improves worker safety and efficiency but also provides Linde with a scalable access solution that can be adapted or expanded as facility needs evolve.

Project Profile: ROOF NAVIGATION ENHANCED AT SUNOCO

CROSSOVERS WITH
ADAPTASTEP™

SafeSmart partnered with Sunoco to develop a safer, more efficient way for workers to navigate around complex ducting infrastructure at one of their operational facilities. Maintenance crews needed a reliable way to cross over multiple large duct runs while maintaining safe access and minimizing unnecessary travel across the site.

Using the AdaptaStep modular access system, SafeSmart engineered customized crossover platforms that allow workers to move safely over existing infrastructure without interfering with the facility's piping layouts, guardrails, or structural components.

Key Challenges

Sunoco required a solution that could safely navigate around existing site infrastructure while improving worker movement and access.

- Large parallel ducting created restricted walk paths
- Existing guardrails and metal deck limited installation options
- Ladders and temporary access created safety risks
- Access routes required safer, more efficient worker movement

ADAPTASTEP™ Advantages

AdaptaStep's modular system allowed SafeSmart to design crossover platforms specifically suited to the site conditions.

- Custom aluminum crossover platforms spanning ducting runs
- Integrated stair access for safe movement between elevations
- Adjustable support legs allowing installation around obstacles
- Compatible with existing deck and guardrail structures
- Modular design supporting future reconfiguration if required

The Outcome

The completed AdaptaStep crossover systems now provide Sunoco with safer, more efficient navigation across complex ducting infrastructure. Workers can move directly across the platforms rather than walking long distances around equipment, improving productivity while maintaining safe access.

By integrating with existing structures and avoiding major site modifications, the modular aluminum system delivered a durable long-term access solution with minimal disruption during installation. The project also highlighted the value of SafeSmart's nationwide 3D scanning service, which ensures precise measurements and accurate fitment for complex industrial environments—reducing installation issues and helping projects move forward with confidence.
